OKONOGI TAKAHIRO

(54) DISK CACHE CONTROL SYSTEM

(57)Abstract:

PROBLEM TO BE SOLVED: To improve the hit rate of disk cache and to shorten the input/output processing time.

SOLUTION: When data for a user program 1 to request input are stored in a disk cache memory 7, these data are read out of the disk cache memory 7 and applied to the user program 1 by a cache control means 5 but when these data are not stored, they are read out of a file and applied to the user program 1. When it is judged while referring to input/output history information in the past to data in the file that possibility for data read out of the disk cache memory 7 to be inputted/outputted again is high the cache control means 5 improves the resident degree of these data in the disk cache memory 7. When the possibility for the data read out of the file to be inputted/outputted again is judged high, these data are stored in the disk cache memory 7.
